10 Reasons why you should work with *SATELLITE*

1. **Reliable and flexible support for e-learning content creation and management strategies**

   If your e-learning content is produced by different departments and/or agencies in different locations. You need a tool that enables smooth collaboration between departments / agencies and your business. Not only should defined production standards and procedures be adhered to, but also translations and/or adjustments should be carried out quickly within a quality assured environment.

   In *SATELLITE* country-specific localisation and versioning of language translations can all be handled in a single project. Production templates and standards are maintained within a *FRAMEWORK* that ensures consistent standards are easily implemented across departments/agencies.

2. **Simple variant and version management**

   If you produce e-learning content in different languages or variants and want to retain control and overview at all times.

   With *SATELLITE* you can create several language and/or variants from a master course. Content in the variant courses can be linked to the master course so that changes made to the master course also appear in the variant courses. Integrated version management also gives you variable backup options to restore older versions of the course.

3. **Sophisticated roles and rights system**

   If you work with various internal departments or external agencies on an e-learning course and want to flexibly combine internal and external resources.

   A roles and rights access management system is integrated into *SATELLITE*, through which each party only gets access to the content and functionality that is necessary for their task.

4. Always up-to-date

If you need a lot of bespoke e-learning templates and application functionality for your company. However, in the future you want your bespoke functionality to work within the most recent versions of your authoring tool and production platform.

With the browser-based authoring platform *SATELLITE* you can use a *FRAMEWORK* that ensures a consistent and standardised production process for learning content without being cut off from further tool development.

5. Flexible formats: Single-Source Publishing

If you need e-learning courses or associated resources in different output formats.

With *SATELLITE* you can publish your e-learning courses and other content in a variety of formats - from SCORM web-based training to presentations, eBooks and PDFs.

6. Smart team working

If your project team is spread over different locations you will need a tool that allows simultaneous and collaborative work on a project in real time.

With the browser-based *SATELLITE* production platform you can develop and coordinate your e-learning projects in real time. Each project member has access to the latest project version - according to their role and rights. To prevent accidentally overwriting other users' content within a project our lock feature works at the course, chapter and individual page levels to give authors full control over their own editing. An integrated internal communication system for messages and tasks linked to specific content items completes the perfect collaboration tool.

7. **A single platform with two authoring interfaces**

You want to quickly turn your training content into e-learning courses, but your trainers / subject matter experts are not trained e-learning authors.

With *SATELLITE* two customisable editing interfaces are provided. The *FAST-TRAIN* editor can be used for rapid-authoring, localisation and reuse of existing content to create "Learning Nuggets". The *EVOLUTION³* editor can be used to create sophisticated structured content, course variants or to refine the content that has been created using the *FAST-TRAIN* editor.

8. **Tailor Made Service**

Not only do you need a good authoring tool with reliable support to assist you, but you also need additional resources to help build or customise your e-learning courses?

CBTL offers you both technical and instructional design support as needed. In addition, we are always happy to assist you in the creation of your e-learning courses.

9. **Flexible e-learning content production workflows**

Unforeseen developments in a project are not uncommon. Therefore, a platform that can be flexibly adapted to your workflows and processes, should be indispensable for you?

Not only does *SATELLITE* offer anytime, anywhere online browser-based access, extensive roles and rights system, messaging and task collaboration tools, diverse single-source publishing options, translation and reporting tools, etc. It also allows the interfaces to be customised for different roles or different functionality to be included in different templates.

10. **Developed by content creators for content creators for nearly 20 years**

We use *SATELLITE* ourselves on a daily basis and continuously develop the tool further - based on our own experience and the requirements of our customers.

We build these new features into the standard configuration of *SATELLITE* - so that you have the most powerful tools that are always up to date and adaptable to your own special requirements at any time.
